HUMAN RESOURCES FOR TREATING NEW CANCER CASES IN EGYPT

Executive Summary

The purpose of this report is to describe the human resources needed in Egypt to treat new cancer patients.

The population of Egypt is approximately 81.53 million (41.01 million men and 40.52 million women) and the estimated number of new cancer cases in Egypt for the year 2008, based on Globocan data for Egypt as a whole (http://globocan.iarc.fr/) was 68805 (35349 in men and 33456 in women) (Table A). The five most common cancers in Egypt are (1) breast, (2) urological (bladder, kidney, prostate and testis), (3) hematological malignancies (Hodgkin lymphoma, non-Hodgkin lymphoma, multiple myeloma, leukemia), (4) liver and (5) head and neck (lip and oral cavity, nasopharynx, other pharynx, larynx and thyroid).

Table A: The ten most frequently occurring cancers in Egypt for men and women based on 2008 Globocan data (http://globocan.iarc.fr/).

Cancer	Both	Rank	Men	Rank	Women	Rank
All cancers excl. non-melanoma skin cancer	68805		35349		33456	
Breast	12621	1	0	-	12621	1
Urological	11035	2	9312	1	1723	5
Hematological	10380	3	6199	2	4181	2
Liver	5511	4	4202	3	1309	7
Head & neck	4490	5	2592	5	1898	4
Lung	3423	6	2652	4	771	9
Colorectal	2920	7	1475	6	1445	6
Gynecological	2605	8	0	-	2605	3
Brain, nervous system	2323	9	1371	7	952	8
Stomach	1433	10	850	9	583	10
Pancreas	1266	11	801	10	465	12

Newly diagnosed cancer patients need pathology, surgery, chemotherapy and/or radiation therapy. The number of oncologists needed is based, therefore, on the number of patients requiring pathology, surgery, chemotherapy and radiation therapy (Table B). This number is estimated from the percentage of patients

requiring surgery, chemotherapy and/or radiation therapy for the top ten cancers in both men and women. For developing countries the International Atomic Energy Agency (IAEA) recommends training radiation/clinical oncologists who can prescribe both radiation and chemotherapy for the common solid cancers, instead of separate medical and radiation oncologists. Hematological malignancies are treated primarily by hematologist-oncologists. The number of specialists needed is based upon the number of cancer patients but each city, in order to ensure coverage if one person leaves or goes on vacation, must have at least 2 surgical oncologists, 2 radiation/clinical oncologists, 2 hematologist oncologists, etc.

Table B: Number of oncologists needed for Egypt's two most populous cities based on 2013 population estimates (http://citypopulation.de/) and 2008 Globocan data for new cancer cases (http://globocan.iarc.fr/).

	New Cancer Cases	Hematologist Oncologists	Surgical Oncologist s	Radiation / Clinical Oncologist s	Urologic Oncologist s	Gynecologic Oncologists	Neuro- oncologist s	Pathologist s
Cairo	7531	3	8	38	3	2†	2†	16
Giza	6081	2	7	31	3	2†	2†	13

[†]At least 2 are needed in each city.

In addition to oncologists, support staff such as onco-pharmacists, pharmacy technicians, oncology nurses and palliative care specialists is also needed. Many cancer patients require hospitalization for diagnosis, treatment and/or complications, therefore an adequate number of oncology beds will be needed. The number of oncology nurses, onco-pharmacists and pharmacy technicians needed is based upon the number of beds occupied daily by cancer patients while the number of palliative care specialists is based on the number of new cancer cases per year (Table C). The oncology nursing staff for each 24-bed oncology unit (operating 24 hours a day, 7 days a week) comprises of one head nurse and a nurse specialist as well as 13 nurses working 8 hour shifts, 5 days per week.

Table C: Number of oncology Units, oncology nursing and pharmacy staff needed for Egypt's two most populous cities departments based on 2013 population estimates (http://citypopulation.de/) and 2008 Globocan data for new cancer cases (http://globocan.iarc.fr/).

	New Cancer Cases	Oncology Beds/Day	24 bed Oncology Wards	Onco- Pharmacists	Pharmacy Technicians	Palliative Care Specialists	Oncology Ward Nurses
Cairo	7531	139	6	24	36	16	90
Giza	6081	112	5	20	30	13	75

Since many cancer patients require radiotherapy, appropriately equipped facilities will be needed along with radiation oncology staff (Tables D and E). Radiation oncology staff includes radiation therapy technicians, medical physicists, Linac engineers and radiation oncology nurses in addition to

radiation/clinical oncologists. The minimum radiation therapy equipment requirements are at least one of each: Linac, brachytherapy unit, CT simulator, treatment planning computer and dosimetry/quality assurance package.

Table D: Radiation Therapy Staff needed for Egypt's two most populous cities based on 2013 population estimates (http://citypopulation.de/) and 2008 Globocan data for new cancer cases (http://globocan.iarc.fr/).

	New Cancer Cases	Radiation / Clinical Oncologists	Radiation Therapy Technicians	Medical Physicists	Linac Engineers	Radiation Oncology Nurses
Cairo	7531	38	52	18	5	18
Giza	6081	31	42	14	4	14

Table E: Radiation Therapy Equipment needed for Egypt's two most populous cities based on 2013 population estimates (http://citypopulation.de/) and 2008 Globocan data for new cancer cases (http://globocan.iarc.fr/).

	New Cancer Cases	Linac / Co 60 Megavolt Unit	Brachytherapy Units	CT Simulators	Treatment Planning Computers	Dosimetry /QA Packages
Cairo	7531	9	5	5	5	5
Giza	6081	7	4	4	4	4

NOTE: Guidelines from the IAEA of the United Nations were used to calculate the radiation therapy equipment and staff needed in the setting of a developing Egypt. Guidelines from the Oncology Nursing Society were used to calculate the number of nurses needed. Several other specialty societies were also requested to provide guidelines but in most cases there were none, therefore colleagues active in those fields were consulted for estimating the number of staff needed.
